A safer tomorrow starts with research today

MPS is the world's leading member-owned, not-for-profit protection organisation for doctors, dentists, and healthcare professionals, with over 300,000 members and 130 years of global healthcare experience and expertise.

The purpose of The MPS Foundation is to undertake research, analysis, education, and training to enable healthcare professionals and teams to provide better care for their patients and improve their own wellbeing.

To achieve this, we support and fund research across the world that will make a difference and can be applied in the workplace.

To help MPS members and professional colleagues meet the challenges of improving patient care, patient safety, patient outcomes, and healthcare professional wellbeing, we have established The MPS Foundation.

This groundbreaking research funding initiative aims to make the world safer for patients and healthcare professionals in hospital and outpatient practice, and dental care environments.

The MPS Foundation's strategic goals

We will support research that makes a meaningful contribution to our world by:

- reducing risk for patients, MPS members, and the wider profession
- improving wellbeing for medical and dental professionals
- increasing the body of knowledge around patient care, safety and outcomes, and healthcare professional wellbeing
- informing, developing, and increasing expertise in risk reduction and management.

“Our research will help identify better ways to manage anxiety for dental patients and improve dentist wellbeing.”

Prof Mona Nasser, 2022 Grant Recipient

What we fund

To maximise the global impact of The MPS Foundation and improve patient care, patient safety, patient outcomes, and healthcare professional wellbeing, we will focus our funding in the following five areas:

1 The impact of human factors

We are interested in researching the impact people and teams have on patient care, safety, outcomes, and risk, including:

Communication:

- communication between patients and healthcare professionals
- causes of communication breakdown
- patient involvement in decision making
- how to manage patients' expectations
- improving patient voice in delivering healthcare
- the impact of the media (both positive and negative) and the public perception of healthcare professionals.

Consent:

- the use of third parties in obtaining consent
- obtaining consent in remote working
- the impact of leadership and leadership styles on patient safety and risk
- the impact of culture
- generational differences in response to risk and its impact on patient safety, culture, and attitudes to risk.

2 The impact of processes and delivery models

We welcome research into the effects of process and compliance on delivering healthcare, including:

- the effective use of clinical registries
- the impact of incentivisation on healthcare professionals and patient care, outcomes, and risk
- the impact of new roles, responsibilities, and functions within healthcare and the implications for quality assurance and risk management
- the impact of clinician mobility, effective risk management, and quality assurance of healthcare professionals who transfer from one healthcare system to another
- private hospital governance
- building system resilience.

3 Healthcare professional wellbeing

The personal and professional wellbeing and development of healthcare professionals and teams remains our priority. For this reason, we're interested in research that recognises and addresses the following:

- burnout, resilience, and self-awareness
- the need for healthcare professionals to consider their own mental and physical health and performance in delivering the very best for their patients.

4 Digital integration and technology

Digital and technological developments continue to help healthcare professionals and teams to maximise opportunities and minimise risks. We are particularly interested in research into:

- the use of Artificial Intelligence as a diagnostic tool, including research associated with accuracy and risk management
- the impact of telemedicine and social media, and the risks they present to healthcare professionals and patients
- the impact of telemedicine and social media on healthcare professional wellbeing.

5 Evaluation of the effectiveness of teaching and learning innovations

Effective teaching and learning innovations are central to risk prevention. We are therefore interested in research into:

- how to make CPD impactful and effective
- creating a learning organisation in a regulated environment
- effective transfer of knowledge and skills to the workplace to increase patient safety, reduce risk, and enhance wellbeing
- how to encourage the sharing of learning from near misses
- how to create learning opportunities that enable new entrants to manage errors in a reflective way.

What our funding doesn't cover

Unfortunately, our grants cannot be used for the following:

- ✗ purchase or maintenance of capital equipment, including clinical equipment
- ✗ purchase or maintenance of computer hardware unless there are exceptional circumstances
- ✗ research aimed at setting standards for clinical practice*
- ✗ research that is a service evaluation*
- ✗ research associated with clinical trials*
- ✗ market research
- ✗ undergraduate or postgraduate education involving taught programmes (we would consider funding the research element of a PhD)
- ✗ PhD university fees
- ✗ overseas education or training
- ✗ projects outside of MPS's geographical areas of interest*
- ✗ sponsorship of events, conferences etc.
- ✗ communication and promotional materials
- ✗ indirect costs of the research or any other indirect/overhead costs – management costs as part of a grant will be paid to an agreed level
- ✗ work undertaken prior to the start date of the grant
- ✗ employing grant recipients or participants
- ✗ the cost of employing a permanent member of staff to cover an applicant's duties
- ✗ travel costs not associated directly with the delivery of the project.

Above all, we welcome proposals that are innovative, original, evidence-based, and focused on applied research.

We favour projects whose outcomes can be applied to hospital and outpatient practice, and dental care environments, and will give priority to proposals that involve and impact more than one country or region.

[*See the FAQs section for more information.](#)

Who can apply?

We welcome applications from professionals with a wide range of research experience, from graduates to seasoned academics, in every corner of the research world.

This includes:

- MPS members and clients
- universities
- medical schools
- dental schools
- third sector and private research institutions and organisations
- hospitals or hospital groups (public or private)
- local hospital networks
- primary health networks
- dental practices
- dental groups
- non-MPS members and organisations.

How much can you apply for?

The MPS Foundation will consider two kinds of proposals:

- proposals with a total budget of up to £60,000, or equivalent in local currency, which last between 3 and 24 months
- proposals with a total budget of more than £60,000 and up to £200,000, or equivalent in local currency, which last between 12 and 36 months.

Grant applicants will receive a maximum of £100,000 in any one year.

The total number, location, focus, and value of the projects we fund will ultimately be based on the quantity and quality of applications we receive.

The MPS Foundation Board will make the final decision.

Can projects be co-funded?

We are happy to consider funding projects that have already received or had commitments for funding from other sources. In these cases, we will clearly define the outcomes we are funding.

For example, in a digital project, which included funding from another source, our funding would focus on the patient safety and risk element of the research.

Please disclose any previous or existing funding, or funding you intend to apply for outside of The MPS Foundation, in your application.

How the application process works

The application process includes three stages:

Stage one: Registration

To register your interest for funding, complete your details on The MPS Foundation's online grant portal. You can do this at any time of the year, but we recommend you do this before submitting an Expression of Interest.

If you register your details while the grant funding window is closed, we will automatically notify you when it is next open.

Stage two: Expressions of Interest

To apply for funding, you will need to submit an Expression of Interest. This should include:

- organisational details
- project lead details
- a proposed project title
- submissions should be no more than 750 words that cover:
 - why the project is important
 - who the target population for the project will be
 - why the project is original and innovative
 - how you intend to conduct the project
 - the anticipated results and impact of the research
- an outline of how your project meets The MPS Foundation's goals and priorities
- an indication of budget and timescales.

This stage is designed to allow us to assess how your project fits with the objectives and priorities of The MPS Foundation. All applicants wishing to be considered for funding will need to complete their Expression of Interest online by the deadline. The deadline will only be extended in exceptional circumstances.

The MPS Foundation will assess applications and only those that are shortlisted will be asked to proceed to the next stage. Applications that are outside the financial or time limits will automatically be excluded.

The MPS Foundation reserves the right to ask different projects to work collaboratively where similar areas of research are being undertaken using similar methods – especially where the projects are in different countries. If you would prefer not to work this way, you can reject this request.

Stage three: Full Application

If your Expression of Interest is shortlisted by the panel, we will invite you to proceed to stage three.

As part of the process, we will also ask you to submit a more detailed application, which includes:

- further information about the project design and methodology
- a detailed project plan
- information about the project team, including their CVs
- your ethical considerations
- a budget breakdown
- dissemination plans
- an outline of how your project could be scaled up for a national or global solution.

You can find out more about application timescales at www.thempsfoundation.org

Please ensure you read our guides on **How to complete your Expression of Interest** and **How to make a good application**.

Evaluation process and criteria

Expressions of Interest will be evaluated to ensure they match The MPS Foundation's goals and priorities. Projects invited to submit a full application will be evaluated using a weighted evaluation system. This criteria is available at www.thempsfoundation.org

Stage two criteria includes:

- relevance of the project to our priorities and focus
- project impact
- project originality
- applicant experience and support.

Stage three criteria includes:

- detailed project design
- project rationale and relevance
- project scalability and sustainability
- project timeframes
- project costs and budget
- how important funding from The MPS Foundation is to the delivery of the project.

Applicants invited to submit a full application will be provided with feedback, including any areas where The MPS Foundation requires further detail or clarification.

In some circumstances an applicant may present an application that has merit, but in the view of the judging panel the project is not yet ready to start. In these circumstances, The MPS Foundation will work with the applicant to enable them to be ready for the next grant application window.

Application timeline

Stage one
Registrations are welcome all year round

Stage two
Expressions of Interest opens
1 March 2023
Expressions of Interest closes
5 May 2023 at 17.00 BST

Stage three
Invitation to apply starts
13 June 2023 at 10.00 BST
Applications close
10 July 2023 at 17.00 BST

Grant recipients notified
15 September 2023

What we ask in return

Making a positive contribution to the world around us is an important part of The MPS Foundation and we welcome the opportunity to work with professionals who share our ethical principles, values, and standards.

When you submit a proposal, we'll ask you to:

- carry out activities in an ethical and lawful manner in line with our policies regarding health and safety, data protection, modern slavery, safeguarding, bribery, tax evasion, and other financial crimes.

For more information, read the [Grant Recipient Code of Conduct](#).

We'll also ask you to comply with five key ethical principles

- Research should aim to maximise the benefit for individuals and society and minimise risk and harm.
- The rights and dignity of individuals and groups should be respected at all times.
- Wherever possible, participation should be voluntary and appropriately informed.
- Research should be conducted with integrity and transparency.
- Independence of research should be maintained and where conflicts of interest cannot be avoided, they should be made explicit.

Meeting milestones

As part of the application process, we will ask you to agree a series of milestones. If your application is successful, we will formally include these in your grant agreement. Any payments will then be linked to the milestones outlined in the agreement, and any regular status meetings you have with The MPS Foundation.

Promoting the future

To help raise awareness of your research and achieve The MPS Foundation's global goals, we would like to publish information about your project in MPS's member publications. From time to time, we may also ask you to take part in promotional activity, such as publicity or photography to promote The MPS Foundation and your research.

As part of the funding agreement, we will ask you to acknowledge The Foundation's support in any research publications you may appear in.

Intellectual property

You will retain the ownership of any academic intellectual property that you develop as a result of the funding and retain the right to use any of the results for academic and research purposes. You will be able to find full details of the Foundation's Intellectual Property agreement within the terms and conditions of your grant agreement.

Starting your project

Before you get started with your project, we will ask you to:

- sign a grant agreement and research contract
- accept the terms and conditions
- agree on project milestones, interim reports, and meetings
- wait for clear confirmation via email and an approved Purchase Order
- ensure ethical approval has been granted.

How grants are paid

While the payments you receive will differ, depending on the time and length of your project, grants will generally be paid in three instalments:

- an initial instalment (up to 30%) when you start the project and receive confirmation from The MPS Foundation
- interim instalments linked to achieving the milestones outlined in the grant agreement
- a final instalment when the project is completed, and the final research report is submitted.

Please note:

If you require payment in a currency other than UK Sterling, we will pre-agree an exchange rate when your grant is awarded.

As part of the funding application process, we will need to carry out financial and due diligence checks before the grant is awarded.

Other ways The MPS Foundation can provide support

Sourcing subjects

With access to the global MPS network and more than 300,000 MPS members, we can often put applicants in touch with organisations and individuals who are willing to take part in research.

On some occasions, we may also be able to identify potential subjects for your research proposal. If this is the case, we'll let you know as soon as possible during the application process.

You are under no obligation to accept our recommendations and choosing other subjects will not affect your application.

Using MPS data

If you would like to use data held by MPS or The MPS Foundation in your project, please let us know as soon as possible in the application process.

Please note, The MPS Foundation reserves the right to reject applicant requests.

“The experience with The MPS Foundation has been very positive so far, with lots of support and timely communication between the Foundation and our team.”

Prof Albert Chan,
2022 Grant Recipient

Frequently asked questions

What is a 'clinical trial'?

A clinical trial is research that requires registration with the relevant bodies/authorities and for the purpose of registration, is defined as any research study that prospectively assigns human participants or groups of humans to one or more health-related interventions to evaluate the effects on health outcomes. Clinical trials may also be referred to as interventional trials. Interventions include but are not restricted to drugs, cells, and other biological products.

What is meant by 'research aimed at setting standards for clinical practice'?

This is research which in part, or in its entirety, is carried out according to internationally agreed methodology for the purpose of defining and setting guidelines for the care and/or delivery of services for most people with a specific condition or need in a particular circumstance or setting.

What is a 'service evaluation'?

These are projects that are designed to define or measure current practice within a service. For example, projects that involve testing out how research outputs proven in one setting translate into another setting. Service evaluation projects will not generate new knowledge that will be generalisable.

Where are MPS's geographical areas of interest?

These are jurisdictions within which MPS provides protection for individuals, groups, and large corporate healthcare providers. They are:

Australia
Bermuda and the Caribbean Islands
Hong Kong
Ireland
Malaysia
New Zealand
Singapore
United Kingdom
South Africa.

The Foundation will not support projects outside of MPS's geographical areas of interest.

“The Foundation is making it possible for researchers from all different backgrounds to show what they have to contribute to the field and support health professionals around the world.”

**Dr Lauren Fowler,
2022 Grant Recipient**
